

MEMORANDUM

DATE:

October 23, 1997.

TO:

Gir Gra

Gary Konwinski, Environmental Manager, B116, X2729

FROM:

Bob Cathel, RCRA Custodian 750 Pad/B788, T893A, X6880 1

SUBJECT:

WASTE CHARACTERIZATION STATUS AT THE SOLAR PONDS BLC-004-97

The waste characterization of the equipment/debris around the solar ponds is approximately 50% complete. The completed items are discussed below:

- 1. Steve Dewitt and I have walked-down the areas around the solar ponds and have discussed his process knowledge of the equipment/debris in these areas.
- 2. I have started a spreadsheet to capture the above process knowledge as well as other pertinent information.
- 3. I was able to locate 11 P/WRE's regarding some materials at the North end of Solar Pond C from June, 1996.
- 4. Some of the equipment between Solar Ponds A & B have been surveyed by Radiological Operations (RO) prior to April, 1996. Scott Newsom is currently searching for these surveys so that I can match them with the appropriate equipment.

Plans to complete the waste characterization include:

- 1. Tagging the equipment/debris. (Week of 10/27/97)
- 2. Getting photographs taken of the tagged equipment/debris. (Week of 10/27/97)
- 3. Matching the RO surveys to the appropriate equipment. (As soon as available)
- 4. Finishing my spreadsheet. (At completion of above tasks)
- 5. Conducting a review of the above documentation with Steve Dewitt and Rich Garcia. (At completion of above tasks)
- 6. Finalizing the waste characterization data and distributing. (At completion of above tasks)

If you have any questions or comments please call me.

015-Miscellaneous Production Zone Cluster Closur M*PM Summary Activity (Charge Number) KA110000

Activity Scope

The 207 Cluster includes the Solar Evaporation Ponds (207A, B, and C), Buildings 788 and 788A, associated tanks, and equipment related solely to the operation and maintenance of these facilities.

,The scope of this activity includes routine tasks and functions to maintain the 207 Cluster facilities in a safe and operable condition in compliance with their authorization basis, Conduct of Operations, and applicable orders and instructions, and capable of supporting other Site activities and programs. The scope includes routine facility management, updating of the authorization basis and the Health and Safety plan, facility-related corrective and preventive maintenance tasks, facility-related surveillances, occurrence reporting, freeze protection, snow removel, maintaining and exercising emergency response plans and a hazard communications program, providing procedural support of JCUSC concerns, training for one facility manager, and a prorated share of facility support functions such as Plan of the Day (POD), annual work plan development and administration, and property management.

The scope of this activity does not include efforts in support of waste and other projects and programs, container movements, regulatory compliance inspections, maintenance of Personal Protective Equipment (PPE), project-related supplies, coordinating and executing the training of building staff, salaried and hourly labor who support projects, maintenance of project-related test and operating equipment. DOT filter testing, funding for grievance settlements, and project support functions such as WEMS, management assessments of efforts in support of projects, corrective action tracking, and shift/standing order administration.

Strateev

Strategy:

The strategy is simply to conduct those landlord activity tasks and functions which will provide a safely operating and adequately maintained facility which can support waste-related Site programs and projects consistent with the Site mission.

Assumptions:

1. Training Implementation Matrix and supporting Training Implementation Plan for 207 cluster is not considered an Authorization Basis document. As such, a majority of training requirements forumulated by compliance with DOE 5480.2A are funded by separate project WPD. The Landlord baseline only funds training for Building Management.

2. RCRA and Environmental compliance activities funded separately from project WPD.

3. Radiological surveys, RCT supervisors, and RCT training supporting storage of waste arrays are funded separately from project WPD. The Landlord baseline only funds radiological control activities necessary to provide instrumentation for emergency response. 4. Nuclear Material Accountability and Control activities are funded separately from project WPD.

5. Calibration of scales in the facility will be funded separately from project WPD.

6. The Landlord baseline will provide funding for the emergency preparedness intrastructure and performance of quartly drill/training exercises.

7. Maintenance of power distribution system support of mobile assay units is funded separately by project WPD.

- 8. Maintenance of the overhead crane which supports waste shipments to the Weste legislation Pilot Plant is funded separately by project WPD.
- 9. A complete re-write and accident analysis of the 664 Final Safety Analysis Report will not occur during FY 98 or FY 99. The Landlord baseline will fund only completion of annual update and revison issue process.

- An Operational Readiness Evaluation of the 207 facility will not be pursued.
 Any needed cargo replacements or repairs are funded separately by project WPD.
- 12. No General Plant Projects or installation of Capital Equipment Items will be pursued within the 664 Landlord baseline during FY 98 or FY 99. 13. No Engineering Support services for updating facility drawings will be necessary during FY 98 and FY 99.

14. No structural facility inspection services will be necessary during FY 98 and FY 99.

- 15. Baseline activities will not uncover any tangible cost reduction proposals.

 16. Hourly attendance of Pre-evolution briefs is funded separately by project WPD; all Pre/post evolution briefs are project specific.
- 17. Information Resource Management Support services funded separately by project WPD,
- 18. Interviews, recruitment, and relocation costs shall be funded separately by project WPO.

19. NOT services are not applicable to Landlord baseline activity.

- 20. Nuclear Engineering services applicable to the Landlord baseline only include support of the annual update of the FSAR/Authorization Basis and processing of USQDs.
- 21. No new office furniture or equipment will be procured by the baseline, excesses shall be re-utilized.
- 22. Physical and medical examinations will be separately funded by project WPD.
- 23. A need for Project Control services will be encountered during FY 98 and FY 99.
